Appendices

Appendix A – Project Site Data

- Project Location Map
- USDA Soils Data
- NOAA Rainfall Data
- FEMA Flood Insurance Rate Map

Appendix B – Critical Storm Calculation

Appendix C – Pre-Development Calculations

- Tributary Area Map
- Model Calculations

Appendix D – Post-Development Calculations

- Tributary Area Map
- Model Calculations

Appendix E – Routed Calculations

- Outlet Structure Detail
- Model Calculations

Appendix F – Storm Sewer Calculations

Project Information

The project is located in Hilliard, Ohio on the corner of Center Street and Wayne Street. The proposed location of the Center Street Market is currently zoned as mixed-use in the historical Old Hilliard District. The proposed 17,000 sf commercial building will be partitioned into multiple sections including a market area, event space, and microbrewery/pub. The 0.740 acre urban site will consist of said commercial building, associated utilities, drives, sidewalk, and pavement improvements. The proposed storm sewer system utilizes underground storage for detention and will discharge directly into an existing storm sewer inlet on the west border of the property. All runoff ultimately discharges into the City of Hilliard storm sewer system.

The purpose of this project is to design a detention system capable of storing the changes in site runoff due to the proposed site construction. Stormwater management for the development will be incorporated into an underground detention system with associated storm sewers and outlet control structure. The detention system will meet the requirements of the City of Hilliard Stormwater Design Manual.

A project location map, soils map and FEMA flood insurance rate map can be found in Appendix A of this report.

Existing Drainage Conditions

The existing site conditions include an open lot consisting of grassy field, gravel areas, and asphalt pavement. The majority of the site currently drains to an existing catch basin located in the center of the lot with small portions of the site draining undetained to the right-of-way. The entirety of the existing site ultimately discharges into the City of Hilliard storm sewer system.

The pre-developed tributary area consists of 0.740 acres of paved parking lot, gravel parking lot, and grass cover, which results in a weighted CN of 92. Additionally, the pre-developed time of concentration (TC) is 10.0 minutes.

NOAA Rainfall data can be found in Appendix A, a pre-developed tributary area map and pre-developed runoff calculations using HydroCAD Version 10.00 by HydroCAD Software Solutions, LLC can be found in Appendix C of this report.

Developed Drainage Conditions

The post-development conditions will be modified as described in the project description of this report. Due to the construction, a storm sewer system will be required. This system will outlet into an underground detention system which will be used for water quantity treatment. The underground detention system will provide storage for the 1-100 year storm events and will discharge into an existing storm sewer inlet located along Center Street. The post-developed tributary area consists of 0.740 acres of impervious area, which results in a weighted CN of 98. Additionally, the post-developed time of concentration (TC) is 10.0 minutes. The proposed tributary map for the post-developed conditions can be found in Appendix D.

General Stormwater Control Narrative

The critical storm event was calculated by comparing the pre-developed conditions to the post-developed conditions 1-year, 24-hour event using the SCS Type II distribution curve. Detailed Calculations can be found in Appendix B.

- Percentage Increase = 39%
- Critical Storm = 5-Year Event

Stormwater Quantity Control

Per the City of Hilliard Stormwater Design Manual a 39% increase in runoff assigns the critical storm as the 5-year storm event. The post-developed release rates for storm events 1-5 will release at the pre-developed 1 year event. For every storm event thereafter (10-100 year event) the post-developed release rate will be released at the pre-developed rate.

Table 3.2.1 Proposed Outlet Structure

Invert	Description
930.61	Primary 12" Culvert
930.61	10.0" X 4.4" Rectangular Orifice
931.95	24.0" X 6.0" Rectangular Orifice

*Outlet Structure Detail can be found in Appendix E

Table 3.2.2 Post-Developed Stormwater Management Summary

Storm Event	Allowable Release Rate (cfs)	Post-Developed Flow (cfs)	Detention Basin Release Rate (cfs)	Detention Elevation (feet)	Percent Allowable Peak Discharge
1-Year	1.56	1.97	1.20	931.46	76.92
2-Year	1.56	2.37	1.35	931.64	86.54
5-Year	1.56	2.93	1.54	931.90	98.72
10-Year	3.03	3.38	1.99	932.09	65.68
25-Year	3.70	4.02	2.85	932.25	77.03
50-Year	4.24	4.55	3.49	932.36	82.31
100-Year	4.82	5.11	4.23	932.46	87.76

Stormwater Quality Control

Water quality drawdown per the Ohio EPA NPDES Permit No.: OHCO00005 is not required for this site as the project is less than 1.0 acre of earth disturbance.

Storm Sewer

An onsite storm sewer system designed for the 2-year design storm and 5-year HGL check storm, per the City of Hilliard Stormwater Design Manual, will be installed to convey stormwater for the development to the proposed retention basin. Additionally, flood routing for storm events up to the 100-year event has been provided overland.

Storm sewer system design calculations can be found in Appendix F, of this report.

Summary and Conclusions

This project has analyzed the pre-developed and post-developed conditions for all storm frequencies (1-100 year) to determine the allowable peak discharge rates and storage requirements. The underground detention system and storm system have been designed to meet or exceed the detention requirements set forth by the City of Hilliard.

Accordingly, we believe the proposed improvements will not adversely affect this site, adjacent property owners, or the City of Hilliard.

¹ Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS). Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values. Please refer to NOAA Atlas 14 document for more information.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
 Web Soil Survey URL:
 Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Franklin County, Ohio
 Survey Area Data: Version 15, Oct 5, 2017

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Aug 4, 2014—Aug 27, 2014

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
CsA	Crosby-Urban land complex, 0 to 2 percent slopes	0.8	100.0%
Totals for Area of Interest		0.8	100.0%

Franklin County, Ohio

CsA—Crosby-Urban land complex, 0 to 2 percent slopes

Map Unit Setting

National map unit symbol: 2w0tj
Elevation: 520 to 1,550 feet
Mean annual precipitation: 36 to 44 inches
Mean annual air temperature: 48 to 54 degrees F
Frost-free period: 145 to 180 days
Farmland classification: Not prime farmland

Map Unit Composition

Crosby and similar soils: 56 percent
Urban land: 35 percent
Minor components: 9 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Crosby

Setting

Landform: Ground moraines, recessional moraines, water-lain moraines
Landform position (two-dimensional): Backslope, footslope, summit
Landform position (three-dimensional): Interfluve, rise
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Silty material or loess over loamy till

Typical profile

Ap - 0 to 8 inches: silt loam
BE - 8 to 11 inches: silt loam
Bt1 - 11 to 14 inches: silt loam
2Bt2 - 14 to 28 inches: silty clay loam
2BCt - 28 to 36 inches: loam
2Cd - 36 to 79 inches: loam

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: 24 to 40 inches to densic material
Natural drainage class: Somewhat poorly drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Low to moderately high (0.01 to 0.20 in/hr)
Depth to water table: About 6 to 24 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum in profile: 50 percent
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water storage in profile: Low (about 5.7 inches)

Interpretive groups

Land capability classification (irrigated): None specified

Land capability classification (nonirrigated): 2w

Hydrologic Soil Group: C/D

Hydric soil rating: No

Minor Components

Kokomo, drained

Percent of map unit: 5 percent

Landform: Depressions, swales, water-lain moraines

Landform position (two-dimensional): Footslope, toeslope

Landform position (three-dimensional): Base slope, dip

Down-slope shape: Linear

Across-slope shape: Concave

Hydric soil rating: Yes

Celina, eroded

Percent of map unit: 3 percent

Landform: Ground moraines, recessional moraines, water-lain moraines

Landform position (two-dimensional): Backslope, summit, shoulder

Landform position (three-dimensional): Crest, head slope, nose slope, side slope, rise

Down-slope shape: Convex, linear

Across-slope shape: Linear, convex

Hydric soil rating: No

Miamian, eroded

Percent of map unit: 1 percent

Landform: Ground moraines, recessional moraines, water-lain moraines

Landform position (two-dimensional): Summit, backslope, shoulder

Landform position (three-dimensional): Crest, head slope, nose slope, side slope, rise

Down-slope shape: Convex, linear

Across-slope shape: Linear, convex

Hydric soil rating: No

Curve Number, CN	<u>92</u>
Runoff, Q	<u>1.56</u> CFS
Total Runoff Volume	<u>0.087</u> Acre-Feet

Developed Conditions**1 Year, 24 Hour Storm**

Project Area	<u>0.740</u> Acres
Ranfall, P	<u>2.19</u> Inches
Curve Number, CN	<u>98</u>
Runoff, Q	<u>1.97</u> CFS
Total Runoff Volume	<u>0.121</u> Acre-Feet

Runoff Increase Due to Development

Existing Runoff	0.087 Acre-Feet
Development Runoff	0.121 Acre-Feet
Percent Increase	39 %

Critical Storm

39% Increase in Runoff; Requires a 5-year critical storm.

A. Stormwater runoff peak for the 5-year, developed storm will not exceed the stormwater runoff peak for the 1 year, existing storm.

B. For storms great than the 5-year storm, the developed stormwater runoff will not exceed the existing stormwater runoff peak for each storm. Refer to the stormwater runoff summary for allowable and design peaks.
